```
The invention describes an isolated MAD Gomain containing playing to the amino acid sequence of PAAD appropriate conclaiming a caspase recruitment domain (ASC)-2 fully defined in specification, where (I) is biologically active. (I) is useful for identifying a (I)-associated polypeptide, an agent altering that association and agents that modulate PAAD domain mediated inhibition of muclear factor kappa B (NFkappaB). A NB-ARC domain polypeptide is useful for identifying an agent that modulates the activity of the NB-ARC domain of identifying an agent that modulates the activity of the NB-ARC domain of identifying an agent that modulates the activity of the NB-ARC domain of identifying an agent that modulates the activity of the NB-ARC domain of I.) (I) or its functional fragments is useful in altering cellular or biochemical process such as apoptosis, NPRappaB induction, cytokine coressing, cytokine receptor signaling caspase-mediated proteclysis or control of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain of the NP-ARC domain immunodeficiency virus inflammatory diseases and ulcerative colitis, graft created not (HIV). (I) is useful for diagnosing cancer or monitoring cancer therapy. This is the amino acid sequence of a human PAAD and nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 ITHFGPEEAWRLALSTFERINRKDLWERGQREDLVRDPQETYRDYVRRKFRLMEDRNARL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       IRKKLLPELSLLITTRPTALEKLHRLLEHPRHVEILGFSEAERKEYFYKYFHNAEQAGQV 360
                                                                                                                                                                                                     The present invention relates the DNA and their encoded proteins, where the proteins contain at least one PYD (pyrin) domain. These can be used to treat diseases associated with impaired intracellular signal transduction, particularly inflammation such as psoriasis, arteriosclerosis, bacterial or viral infections (particularly meningitis and pneumonia), multiple sclerosis, rheumatoid arthritis, asthma, sarcoidosis, glomerulonephritis and osteoarthritis, and also Alzheimer's and Parkinson's diseases. The present sequence is a protein of the
                                                                                                           New DNA encoding protein with pyrin domain, useful for treating diseases involving impaired signal transduction, particularly inflammation, also proteins and antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GECVNLSHRYTRLLLVKEHSNPMQVQQLLDTGRGHARTVGHQASPIKIETLFEPDEERP

The PYRIN protein and DNA sequences of the invention are useful for modulating and diagnosing stress-related, apoptopic and inflammatory responses. The PYRIN protein and DNA sequences are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inflammatory response; inflammatory disorder; immune system disorder; crohn's disease; multiple sclerosis; cancer; leukaemia; autoimmune disorder; arthritis; neurological disease; Alzheimer's disease; Parkinson's disease; chromosomal mapping; tissue typing; forensic biology; predictive medicine; pharmacogenomics; transcription profilling; PYRIN-8.

```

New polynuclectide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer.

Claim 20; SEQ ID NO 1369; 1185pp; English.

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC3089) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 9\$\forall floatical with the novel human cDNAs. The inventionally encompasses expression the novel human cDNAs. The invention additionally encompasses expression convectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; a method of detecting of polynucleotides or polypeptides of the invention; and methods of convention further discloses methods of peventing, treating or invention further discloses methods of peventing polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the invention, methods for the identification of compounds that modulate the convention; methods for the polynucleotide and/or polypeptide; and 767 contig sequences corresponding to the cohas encoded by the contigs and 767 (ADC31861-ADC32627) and the polypeptides of the invention are contig sequences corresponding to the cohase of the invention are contiguated and and an indiagnostics, drug screening, forensics, gene mapping, in the

identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, platelet cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human polypeptide sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

Sequence 865 AA;

for identifying an agent that modulates the activity of the NB-ARC domain of (I). (I) or its functional fragments is useful in altering cellular or biochemical process such as apoptosis, NFkappaB induction, cytokine receptor signaling caspase-mediated proteolysis or convocasing, cytokine receptor signaling caspase-mediated proteolysis or convocation, cultaneous proteolysis or convocation in N-terminal kinase activation, thus having modulating effect on cell life and death (apoptosis) inflammation, cell adhesion or other cellular convocation processes. (I) is useful for treating cancer pathologies, keratinocyte, hyperplasia, neoplasia, keloid benign proseatic chypertrophy, inflammatory hyperplasia, keloid benign proseatic chypertrophy, inflammatory diseases such as allergies, arthritis, leukacemia, lymphomas; inflammatory diseases such as allergies, arthritis, leukacemia, lymphomas; inflammatory diseases such as allergies, arthritis, usuch as parkinson's and Alzheimer's disease and ulcerative diseases convocation (HIV). (I) is useful for diagnosing cancer or monitoring cancer therapy. This is the amino acid sequence of a human PAAD and nucleotide binding protein PANG leucine-rich-repeat domain (LLR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 603 AA;

The invention relates to an isolated polypeptide comprising one of 10 human nucleic acid associated protein (NAAP1-10), or a biologically active or immunogenic fragment of the polypeptide, and their encoding nucleic acid. Also included are a recombinant polynucleotide acid. Also included are a recombinant polynucleotide, a transgenic organism comprising the recombinant polynucleotide, a nanti-NAAP antibody. Screening for a compound that is effective as an anti-NAAP antibody. Screening for a compound that is effective as an anti-NAAP antibody. Screening for a compound that is effective as an anti-NAAP antibody. Screening for a compound that is effective as an anti-NAAP antibody. Comprising an expression profile of a sample containing the polymucleotide and an array comprising different nucleotide molecules affixed on a solid substrate, nucleotide molecule comprises a first oligonucleotide or polynucleotides of the target (NAAP) polymucleotide. CT he polypeptides and polynucleotides are useful in diagnosing, treating and preventing diseases or conditions associated with the decreased and preventing disease, Alzheimer's disease, stroke, epilepsy), and preventing disease, Alzheimer's disease, stroke, epilepsy), developmental disorders (reg. cancer, atherosclerosis, hepatitis), neurological disorders (Parkinson's disease, Alzheimer's disease, stroke, epilepsy), developmental disorders (reg. immunodeficiency syndrome), allergies, atopic dermatitis, arthritis) and infections (e.g. bacterial, viral, parastitic, protozoal, fungal) and many other diseases and disorders listed in the specification. These are also ther diseases and disorders listed in the specification of the expression or useful in assessing the effects of exogenous compounds on the expression of the nucleic acid and amino acid sequences of NAAP. The NAAP or its

                 or antagonist of the polypeptides, or in altering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. The micraarray is useful in monitoring or measuring protein-protein interactions, drug-target interactions, and gene expression profiles. The present sequence represents an NAAP protein
                                                                                                                                                                                                                                                                    529
                                                                                                                                                                                                                                                                                                                                                   589

New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis, or diabetes, and in chromosome mapping, tissue typing or pharmacogenomics.

Claim 1; Page 100; 332pp; English.

The invention describes an isolated polypeptide (I) comprising any of 27 (18-961 residue amino acid sequences, given in the specification, a manufacture form of them, a sequence that is at least 95 % identical to them, or a sequence having one or more conservative substitutions in them. The polypeptide is useful in manufacturing a medicament for treating a syndrome associated with a human disease selected from a pathology associated with the polypeptide. The NOVX polypeptides, polynucleotides and antibodies are useful in treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, atherosclerosis, cancer, disbetes, immune disease, Albieimer's disease, infections, multiple sclerosis, cancer-associated acheria, and other wasting disorders associated with chronic diseases. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haematopoiesis, count healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in therapeutic or diagnostic methods. The nucleic acids are further used as hybridisation probes, in chromosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The polypeptides are also useful as vaccines. This is the amino acid sequence of a novel human G-protein

WPI; 2003-140627/13. N-PSDB; ACD03623. New NOVX polypeptides and nucleic acids, useful for preventing or treating NOVX-associated disorders, e.g. cancer, cardiomyopathy, atherosclerosis, or diabetes, and in chromosome mapping, tissue typing or pharmacogenomics.

Claim 1; Page 99; 332pp; English.

The invention describes an isolated polypeptide (I) comprising any of 27 (C mature form of them, a sequence that is at least 95 # identical ton, a communication on the specification, a requence having one or more conservative substitutions in them. The polypeptide is useful in manufacturing a medicament for treating a speciated with the pulypeptide. The NOVX polypeptides, polynucleotides associated with the polypeptide. The NOVX polypeptides, polynucleotides and antibodies are useful in treating or preventing NOVX-associated disorders, e.g. cardiomyopathy, atheroscierosis, cancer, diabetes, immune conserse, AlDS, obesity, asthma, haematopoietic disorders, parkinson's disease. Alzheimer's disease, infections, multiple sclerosis, cancer-cassociated cachexia, and other wasting disorders associated with chronic diseases. The nucleic acids and polypeptides may also be used as targets for the identification of small molecules that modulate or inhibit e.g. contropenesis, cell differentiation, cell proliferation, haematopoiesis, or antibodies that bind immunospecifically to NOVX substances for use in thermosome mapping, tissue typing, preventive medicine, and pharmacogenomics. The polypetides are also useful as compled receptor related protein NOV

protein, designated HIRRBMI. HIRRBMI polypeptides and polynucleotides are useful for preventing, treating or ameliorating a medical condition such as a proliferative disorder, immune condition, or a disorder related to aberrant apoptosis modulation, either directly or indirectly, and in modulating signal transduction activity in various cells, tissue and organisms. They are also useful for treating, preventing, or diagnosing diseases of haematopoietic cells, autoimmune disease, argat-versus-host disease, allergic conditions (e.g. akthma), cardiovascular disorders, and neurological diseases, and for increasing the organisms' ability to

nitric oxide (NO), designated as mo and their corresponding proteins. The invention also relates to the isolation and characterisation of three isoforms of mo gene, rno-1, rno-2, rno-3, rno proteins of the invention are useful for inducing differentiation and death in a cancer cell. Diagnosing acute myeloid leukaemia (AML) comprises detecting the expression of a rho gene comprising the nucleotides coding for rno protein. The present sequence is rno-3 protein. Note: This sequence is not shown in the specification but is derived from rno-1 protein shown as SEQ ID NO: 2 in figure 7B of the specification
                Novel polypeptide regulated by nitric oxide useful for inducing acute myeloid leukemia cell differentiation and apoptosis.
                                                                                                                                                      present invention relates to novel genes which are upregulated by

                                                                                                                                                                                            The present invention relates to novel genes which are upregulated by nitric oxide (NO), designated as rno and their corresponding proteins. The invention also relates to the isolation and characterisation of three isoforms of rno gene, rno-1, rno-2, rno-3. rno proteins of the invention are useful for inducing differentiation and death in a cancer cell. Bigmosting acute myeloid leukaemia (AML) comprises detecting the expression of a rho gene comprising the nucleotides coding for rno protein. The present sequence is rno-1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                         782
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            842

The invention describes an isolated PAAD domain containing polypeptide conclude binding protein (PAM) 2-6, pyrin 2, apoptosis-associated speck cucleotide binding protein (PAM) 2-6, pyrin 2, apoptosis-associated speck cucleotide binding protein caspase recruitment domain (ASC)-2 fully chick protein containing a caspase recruitment domain (ASC)-2 fully defined in specification, where (I) is biologically active. (I) is useful for identifying a (I)-associated polypeptide, an agent altering that associated polypeptide, an agent altering that modulates that modulates the activity of the NB-ARC domain polypeptide is useful conclemical process such as apoptosis. NRsappaB induction, cytokine conf (I): (I) or its functional fragments is useful in altering cellular or biochemical process such as apoptosis, NRsappaB induction, cytokine conferminal kinase activation, thus having modulating cellular or biochemical processes such as apoptosis, NRsappaB induction, cytokine confice and death (apoptosis) inflammation, cell adhesion or other cellular or biochemical processes. (I) is useful for treating cancer pathologies, keratinocyte, hyperplasia, neoplasia, fibrosis, smooth muscle cell chypertrophy, inflammatory diseases such as allergies, arthritis, leukaemia, lymphomas; inflammatory diseases such as allergies, arthritis, corrupting astroke, heart failure, neurodegenerative diseases such as parkinson's and Alzheimer's disease, human immunodeficiency virus infection (HIV). (I) is useful for diagnosing cancer or monitoring cancer therapy. This is the amino acid sequence of a human PAAD and nucleotide binding protein PANG Mandaing to another NB-ARC containing protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           183 PRTVVMQGAAGIGKSMLAHKVMLDWADGKLFQGRFDYLFYINCREMNQSATECSMQDLIF 242

                                                                                                   ò
```

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; and methods of polynucleotides or polypeptides of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The invention further discloses methods of peventing, treating or ameliorating a medical condition; kits comprising polynucleotide probes and/or monoclonal antibodies for carrying out the methods of the expression or activity of the polynucleotide and/or polypeptide; and 767 conting sequences corresponding to the cDNA sequences of the invention. New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or (ADC31861-ADC32627) and the polypeptides encoded by the contigs (ADC32628 -ADC33394). The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are Example 2; SEQ ID NO 3050; 1185pp; English.

```
also used for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a human contigencoded polypeptide sequence used in an example of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Novel polypeptide regulated by nitric oxide useful for inducing acute myeloid leukemia cell differentiation and apoptosis.

Claim 29; Page; 23pp; English.

The present invention relates to novel genes which are upregulated by nitric oxide (NO), designated as rno and their corresponding proteins. The invention also relates to the isolation and characterisation of three

(I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed activity of (II) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a

                                                                                                                                                                                                                                                                                                                            783 COLESGACQEMASVLGTNPHLVELDLTGNALEDLGLRLLCQGLRHPVCRLRTLWLKICRL 842
                                                                                                                                                                                                                                                                                                                                                 isoforms of rno gene, rno-1, rno-2, rno-3. rno proteins of the invention are useful for inducing differentiation and death in a cancer cell. Diagnosing acute myeloid leukaemia (AML) comprises detecting the expression of a rho gene comprising the nucleotides coding for rno protein. The present sequence is rno-2 protein. Note: This sequence is not shown in the specification but is derived from rno-1 protein shown as SEQ ID NO: 2 in figure 7B of the specification

                                                                                                                                                                                                                                                             8
```

polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABB30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fitp.wipo.int/pub/published_pct_sequences

A.Title: Purification and characterization of human brain ribonuclease inhibitor.
A.Reference number: S48636; MUID:94311593; PMID:8037455
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
Fibonuclease-angiogenin inhibitor - human
NiAlternate names: ribonuclease inhibitor, placental
Cispecies: Homo sapiens (man)
Cispecies: No. Jun. 1990 #sequence revision 07-Jun. 1990 #text_change 19-May-2000
CiAccession: A31858; 802012; $23933; $48636; T47188

Mol. Biol. 235, 1447-1458, 1994

A,Title: Kinetic parameters of the translocation of bacteriophage T4 gene 41 protein hel A,Reference number: A58645; MUID:94149695; PMID:8107085

A,Fontents: annotation; enzyme activity
C,Coment: This protein has GTPase, dGTPase and dATPase activities, and it is a helicase C,Genetics:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A,Gene: 41
A,Map position: 20.619-22.044
A,Start codon: GUG
C,Superfamily: phage T4 gene 41 protein
C,Keywords: DNA binding; DNA repair; DNA replication; hydrolase; nucleotide binding; P-1
F,197-204/Region: nucleotide-binding motif A (P-loop)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

-!- SIMILARITY: Contains 1 NACHT domain.
-!- SIMILARITY: Contains 7 leucine-rich (LRR) repeats.
-!- CAUTION: Ref.4 sequence differs from that shown due to frameshifts in positions 893, 918 and 926.
                                                               TISSUE SPECIFICITY: Expressed in blood leukocytes. Strongly expressed in polymorphonulclear cells, undetectable or expressed at a lower magnitude in B and T lymphoblasts, respectively. High level of expression detected in chondrocytes. Low or no expression in the other tissues tested.

DISEASE: Defects in CIASI are a cause of familial cold autoinflammatory syndrome (FCAS) [MIM:120100]; commonly known as familial cold unticaria. FCAS is rare autosomal dominant systemic arithmanatory disease characterized by episodes of rash, arthralgia, fever and conjunctivitis after generalized exposure to
                                                                                                                                                                                                                                                                                                                                                                                                       neurologic cutaneous and articular syndrome (CINCA) [MIM:607115]; also known as 'neonatal onset multisystem inflammatory disease,' or NOMID, a rare congenital inflammatory disorder characterized by
                                                                                                                                                                                                                                                                                                      DISEASE: Defects in CIAS1 are a cause of Muckle-Wells syndrome (MMS) [MIM:191900]; a rare autosomal dominant fever syndrome with episodic urticaria, arthralgia, amyloidosis and progressive sensorineural deafines.

DISEASE: Defects in CIAS1 are the cause of chronic infantile.
                                                                                                                                                                                                                                                                                                                                                                                                                                            or NOMID, a rare congenital inflammatory disorder characterize a triad of neonatal onset of cutaneous symptoms, chronic meningitis, and joint manifestations with recurrent fever and

NACHT-, IRR- and PYD-containing protein 7 (PYRIN-containing APAFI-like protein 3).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
for early embryonic development.";

Hum. Reprod. 17:903-911(2002).
-1- TISSUE SPECIFICITY: Occyte specific.
-1- SIMILARITY: Contains 1 DAPIN domain.
-1- SIMILARITY: Contains 1 NACHT domain.
-1- SIMILARITY: Contains 13 leucine-rich (LRR) repeats.
-1- SIMILARITY: Contains 13 leucine-rich (LRR) repeats.
-1- CAUTION: It is not obvious that this is the ortholog of mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

Submitted (SEP-1998) to the EMBL/GenBank/DDBJ databases.
Submitted (SEP-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Acts in vitro to stimulate the secretion of adrenocorticotropic hormone (ACTH). Binds with high affinity to CRF Receptor types 1, 2-alpha, and 2-beta.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the sauvagine/corticotropin-releasing factor/urotensin I family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .

"Kinetic parameters of the translocation of bacteriophage T4 gene 41
protein helicase on single-stranded DNA.";
[1. Mol. Biol. 235:1447-1458[1994].
[2. Mol. Biol. 235:1447-1458[1994].
[3. Mol. Biol. 235:1477-1458[1994].
[4. FUNCTION: Essential replication protein, part of the primase-helicase required for lagging strand DNA synthesis. It acts processively. It forms a protein complex with the gene 59 protein that partly replaces the dda protein complex with the gene 59 protein that partly replaces the dda protein helicase function. Act as single-stranded ATP-dependent DNA helicase.

-!- MISCELLANDEOUS: Interacts with the gene 61 protein to form the T4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 C180 MOUSE STANDARD, PRT; 661 AA.

Exp. Med. 192:23-29 (2000).

- I. FUNCTION: May cooperate with MD-1 and TLR4 to mediate the innate immune response to bacterial lipopolysaccharide (LPS) in B calls. Leads to NF-kappa-B activation. Also involved in the life/death decision of B calls.
- SUBCNIT: Binds to MD-1.
- SUBCNIT: Binds to MD-1.
- TISSUE SPECIFICITY: B lymphocytes and spleen. Not detected in thymus, kidney, muscle, heart, brain or liver.
- SIMILARITY: Belongs to the Toll-like receptor family.
- SIMILARITY: Contains 17 leucine-rich (LRR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EMBL, D37797; BAA07043.1; -.
